APPENDIX I

NOTE

The following alphabetical list (pages 1930-1940) gives abbreviated titles for all sources of publications, such as journals, proceedings, books, etc., used by grantee scientists to publish findings from research projects supported by the Public Health Service, together with the total number of articles reported by the scientists for each source during one year. It includes 25,210 entries from a total of 2,682 sources, including books (682 in number), which are shown separately (pages 1938-1942). A book or a chapter in a book were each counted as a single entry.

A second list (page 1942) shows the most frequently cited journals ranked in descending order by the number of citations in each.

Lastly, the totals for published articles arranged according to supporting Institute or Division, and by date of publication, are given in a summary table (page 1943). The totals for each year include only publications that the scientists reported to the Division of Research Grants during the one year period in which bibliographic information was compiled for this Index. Earlier as well as later editions should be consulted for additional data on publications for any given year.
